/note="Vector: lambdaZAPII; Site_I: EcoRI; Site_2: XhoI;
/note="Vector: lambdaZAPII completed from Geveloping stage III to stage V (Greenwood & Bewley, Can. J. Bot. 60:1751-1760, 1982) endosperm plus embryo of immature castor fruits.
/cDNA was synthesized and cloned into lambdaZAPII according to the instructions of the manufacturer (Stratagene):
/synthesis was primed from the poly(A) tail, and cloned directionally into XhoI (3') and EcoRI (5') sites. In few cases, sequence data indicated that this directionality was reversed. Partial cDNA clones predominate."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

California, Berkeley: http://tropicalis.berkeley.edu/home

CDNA Library Preparation: Richard M. Harland Laboratory, University

Of California, Berkeley

DNA Sequencing: DoB John Genome Institute: http://www.jgi.doe.gov

Clone Distribution: I.M.A.G.E. Consortium/LLNL:

http://image.llnl.gov

Clone Distribution: EST name is generated by the concatenation of

the JGI Clone Id and the direction of sequencing. The suffix '.fwd'

indicates a forward sequencing read of the insert. It does not

Recessarily reflect the orientation of the insert.

Plate: XZT 0333 row: o column: 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanee, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 5::1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The clone sequenced to the left is RP11-125F24, 2000 bp overlap. Actual start of this clone is at base position 9748 of RP11-125F24; actual end is at base position 121688 of RP11-57110.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mapping information for this clone was provided by Dr. Wes Warren, obstruent of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wistl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /cranslation="MALLLVSLLAFLSLGSGCHHRICHCSNRVFLCQESKVTEIPSDL

Title: Perfect :

Run on:

```
The present invention relates to a composition, which comprises at least one antisense oligonucleotide that is complementary to follicle-stimulating horamone receptor (FSHR) coding sequence. The present sequence is one such oligonucleotide used in the composition. The composition of the present invention can be used for regulating hormones of a host. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition for regulating fertility, and for chemoprevention and chemotherapy of cancer, comprises an antisense oligonucleotide that is complementary to a nucleotide sequence of a follicle-stimulating hormone
                                                                                                                                                                                                                                                                                                                                                                                                   Human, cytostatic, follicle-stimulating hormone receptor; FSHR;
fertility; menstrual cycle; chemopreventive; chemotherapy; cancer; ss.
                                                                                                                                                                                                                                                                                                                                                                               Human FSH receptor specific antisense oligonucleotide #2.

The present sequence is one such oligonucleotide used in the composition. The composition of the present invention can be used for regulating hormones of a host. The composition, the composition is useful as a chemopreventive or chemotherapy for cancers (e.g. breast, bladder, cervix, lung, liver, ovary, colon, stomach, or especially ovarian cancers), gestational trophoblastic tumours or testicular germ cell tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition for regulating fertility, and for chemoprevention and chemotherapy of cancer, comprises an antisense oligonucleotide that is complementary to a nucleotide sequence of a follicle-stimulating hormone
composition is also useful for regulating fertility and menstrual cycle. In addition, the composition is useful as a chemopreventive or chemotherapy for cancers (e.g. breast, bladder, cervix, lung, liver, ovary, colon, stomach, or especially ovarian cancers), gestational trophoblastic tumours or testicular germ cell tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; cytostatic; follicle-stimulating hormone receptor; FSHR;

The invention relates to a novel isolated GPCR (G-protein coupled receptor) nucleic acid molecule. The polynucleotide and polypeptide of receptor) nucleic acid molecule. The polynucleotide and polypeptide of the invention demonstrate neuroprotective, noctropic, tranquiliser, antiparate, neuroprotective, notified antidopressant, antidonvulsant, antiparkinsonian, cytostatic, cardiant, hypotensive, antianginal, antidopressatic, ancrecif, anti-HIV, antiasthmatic, osteopathic, uropathic, anti-HIV, antiasthmatic, osteopathic, uropathic, antidicer and antiallergic properties. The nucleic acid molecule and polypeptide of the invention may be useful in diagnosing, preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant cell cycle regulation, neurological disorders, severe mental retardation and dyskinesias, brain disorders, spinal cord disorders, affective disorders, namune-related disorders, endocrinal diseases, growth disorders, immune-related disorders, endocrinal diseases, growth disorders, immune-related disorders, end pituitary disorders. Furthermore, the polynucleotide may be used in chromosome identification, in identifying organisms from minute biological samples, in gene therapy or as a molecular weight marker. The current sequence is that of a human GPCR (G-protein coupled receptor) DNA
                                                                                                                                                                                            GPCR; G-protein coupled receptor; neuroprotective; nootropic; tranquiliser; antimigraine, neuroleptic; antimanic; antidepressant; anticonvulsant; antiparkinsonian; cytostatic; cardiant; hypotensive, antianginal; antiges; anorectic; anti-HIV; antiasthmatic; osteopathic; uropathic; antiulcer; antiallergic; cell cycle regulation; neurological; severe mental retardation; dyskinesia; brain; spinal cord; affective; neoplastic; cardiovascular; immunological; immune; endocrinal; growth; eating; HIV infection; cancer; metabolic; pituitary; chromosome identification; gene therapy; human; ds; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid molecule encoding a human G-protein coupled receptor, useful for diagnosing, preventing or treating diseases involving the receptor, e.g. Parkinson's disease, dementia, asthma, hypertension or

The present invention describes novel human proteins, designated NOVX proteins. The NOVX sequences have cardiant, antiarteriosclerotic, hypotensive, vasotropic, dermatological, anorectic, immunosuppressive, cytostatic, antiinflammatory, neuroprotective, anabolic, nootropic and antiinflammatory, neuroprotective, anabolic, nootropic and antiparkinsonian activities, and can be used in gene therapy. The NOVX sequences can be used as a therapeutic in the manufacture of a medicament for treating a syndrome associated with a human disease, such as a pathology associated with NOVX. The NOVX proteins and nucleic acids concoding them are useful for diagnosing or treating pathologies, diseases or conditions associated with NOVX sequences, including cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, pulmonary concoding protecters, normal diseases, attensial, prostate cancer, diabetes, metabolic disturbances associated with cobesity, transplantation, adrenolatedydystrophy, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disturbances associated with cobesity, transplantation, adrenolatedydystrophy, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disorders, neoplasm, concepting, fertility, haemophilia, graft versus host disease, horn's disease, multiple sclerosis, infectious disease, anorexia, neurodegenerative disorders, haematopoicatic disease, cor Parkinson's disease, immunogens to produce antibodies and as vaccines. The sequences may further be used in chromosome mapping, cidentifying individual from minute biological samples (tissue typing), cand in forensic identification of a biological samples (tissue typing), and in forensic identification of a biological samples in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*teg= a 228 .298 /*teg= nucleotides 228-298 correspond to nucleotides 7-70 of fehr exon 2" 299. 373

A C to T mutation in exon 7 (codon 189) is associated with ovarian dysgenesis. In a method for determining a FSH receptor genotype in a human patient, fshr exon 7, or a portion of it, is isolated by PCR amplification (see also AAT63195-96) and exposed to BsmI. Exon 7 contains a unique BemI site which, if mutated, will produce no

                                       The DNA sequence encoding human follicle stimulating hormone receptor (FSHR) was obtd. by screening a lambda gtll cDNA library constructed from RNA extracted from human testis and amplified, with a rat FSHR cDNA clone as a probe. Positive colonies were used for a secondary screen which isolated five putative human FSHR clones. None of the clones contained the complete hFSHR coding region but could be overlapped using GCG to give the complete sequence. hFSHR binds to FSH to reduce endogenous FSH bioactivity, in females to prevent follicle growth and maturation and in males to prevent spermatogenesis, i.e. as a birth control agent. (Updated on 25-MAR-2003 to correct PN field.)

    New follicle stimulating hormone receptor - and derived antibodies, antidiotypic antibodies, and transfected cells, useful e.g. in diagnosis and as antidote for FSH overstimulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The primers given in AAQ50029-34 were used in the cloning of GST-FSH- R1, GST-FSH-R2 and GST-FSH-R3 fusion protein constructs. Screening of the Muman testis cDNA library with a hFSH-R specific probe resulted in five recombinant phages positive in hybridisation. Sequence analysis was performed of the 2222 bp fragment of pGEM3Zc1 (AAQ50013). (Updated on 25-

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino catids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in corp especial antibody against a particular GPCR. (I) can be used as GPCR modulators and in the production of specific antibody against a particular GPCR, and in the production of specific cartibody against a particular GPCR, and in the production of specific antibodies. The apptides and antibodies are useful for disquesting engine or GPCRs and antibodies are useful for disquesting and designing drugs for treating immune-related disease, immunological-related cisease, collicated diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AlDS, Alzheimer's disease, catherosis, bacterial, fungal, protozoan or viral infections, otheranticis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergise, Crohn's disease, dishertes, graft versus host cisease, parkinson's disease, multiple solerosis, pain, psoriasis, cancer, cardiomyopathy, nauses, hypertension, chipachension, renal disorders, rheumatoid arthritis, rrauma, ulcers, or cany other disorder in which GPCRs are involved. The antibodies may be used in immunoassaye and immunodiagnosis, ABZ42231 to ABZ42289 encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GPCR proteins given in ABP81675 to ABP82018, which are used in exemplification of the present invention

The invention relates to a combination which, comprises a number of polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of dargnosts and treatment of cancer and immunophthology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, forensics and pharmacognomics. The microarray is also useful for monitoring progression of diseases and for developing supplie therefore profiles for the effects of currently available therapeutic drugs. The monitoring progression of diseases and for developing supplications. The combination is also useful for purifying a subpopulation of mands. The array can detect changes in expression in a large number of genes coding carray can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia, immunopathies e.g. AlDS and asthma, neuropathies e.g. Alzheimer's disease including cancer e.g. adenocarcinoma and leukaemia, immunopathies e.g. AlDS and asthma, neuropathies e.g. Alzheimer's disease probe of the invention. Note: The sequence data for this patent did not format directly from USPTO at the present was obtained in electronic format directly from USPTO at the propertical and the prope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; probe; 88; receptor-like polypeptide; transducing polypeptide; effector-like polypeptide; cancer; immunopathology; neuropathology; drug development; toxicology; carcinogenicity; signalling pathway polypeptide; adrenal gland; bladder; bone; signalling pathway polypeptide; adrenal gland; bladder; bone; diabetes; panorreatitis; cervix; tumnour; immunopathology; AIDS; diabetes; panorreatitis; osteoporosis; ulcerative colitis; neuropathology; dementia; amnesia; epilepsy; Alzhelmer's disease; depression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Combination of polynucleotide probes, useful as array elements in microarray for monitoring the expression of a number of target polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to a composition of polynuclectide probes

comprising first polynuclectide probes comprising at least a portion of a

gene encoding a receptor-like polypeptide, second polynuclectide probes

comporising at least a portion of a gene encoding at transducing

polypeptide and third polynuclectide probes comprising at least a portion

of a gene encoding an effector-like polypeptide. The probes of the

composition are useful as array elements in a microarray for monitoring

the expression of target polynuclectides. The microarray for monitoring

the expression of target polynuclectides. The microarray is useful in the

composition are also be used for drug discovery and development,

contrological and carcinogenicity studies, forensics or pharmacogenomics.

Microarrays can also be used for monitoring the progression of diseases

that may be associated with the altered expression of signalling pathway

polypeptides. The composition can also be used to purify a subpopulation

of mRNAs, cDNAs, or genomic fragments in a sample. The expression profile

contendate the diagnosis and treatment of cancer, e.g. cancers of

the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix,

an immunopathology, e.g. AIDS, diabetes, pancreatitis, osteoporosis or

culcerative colitis, or a neuropathology, e.g. dementia, amnesia,

The invention relates to human and mouse G protein-coupled receptors

(GPCRs) and nucleic acids encoding them. The invention also relates to
sequences at least 90% identical to the GPCR proteins and nucleic acids
of the invention; methods of treating, preventing or diagnosing diseases
associated with GPCRs of the invention; methods of screening for
compounds useful in the treatment of GPCR-related diseases; a transgenic
mouse comprising a GPCR gene of the invention; a mouse comprising a
mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
from the transgenic mice; kits comprising several mice, each of which has
a mutation in a different GPCR polymorlectides of the invention. The
comprising a GPCR nucleic acid. The GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
be used in the diagnosis, treatment or prevention of a wide variety of
diseases including neurological disorders (e.g., Alzheimer's disease,
depression, diabetic neuropathy, Parkinson's disease or schizophrenia);
cc capinal infarction); muscular disorders of the colon or intestine
cc syndrome); cardiovascular disorders of the colon or intestine
myocardial infarction); muscular disorders (e.g., angina, cardiac arrhythmia or
myocardial infarction); muscular disorders (e.g., angina, cardiac arrhythmia or
myocardial infarction); muscular disorders, blood disorders (e.g.,
anaemia or leukaemia); immune disorders (e.g., angina, cardiac arrhythmia or
myocardial infarction); maccular disorders, plood disorders (e.g.,
angenia or leukaemia); immune disorders (e.g., angina, cardiac
cc arrhyticis, gout or osteoporosia); metabolic or nutritive disorders (e.g.,
cthritis, gout or osteoporosia); metabolic or nutritive disorders (e.g.,
cthritis, gout or osteoporosia); metabolic or nutritive disorders (e.g.,
cthritis, gout or osteoporosia); metabolic or nutritive disord
joint disorder; metabolic disorder; nutritive disorder; cancer; kidney disorder; liver disorder; lung disorder; breast disorder; ovary disorder; uterus disorder; prostate disorder; testis disorder; skin disorder; stomach disorder; pancrass disorder; spleen disorder; thymus disorder; antiparkinsonian; antimanic; cytostatic; antinflammatory; vasotropic; antianginal; antiarrhythmic; CNS; central nervous system; respiratory; antidiarrhoei; antidiabetic;
                                                                                                                                                                                                                                                                                                                                                                                                  virucide; hepatotropic; antibacterial; antianaemic; antiseborrhoeic; dermatological; antiulcer; antithyroid; antiallergic; anorectic; immunosuppressive; nephrotropic; gene therapy; GPCR modulator; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel mammalian G protein coupled receptors, useful for identifying compounds that modulares diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaitanaris GA, Bergmann JE, Gragerov A, Hohmann J, Li F;

The invention comprises amino acid and DNA sequences which are present in normal and neoplastic ovary cells. The DNA and protein sequences of the invention are useful for determining the presence of an ovary specific nucleic acid or an ovary specific protein in a sample. The DNA and protein sequences of the invention are useful for diagnosing and metastastasts of ovarian cancer and breast cancer. Nucleocides ABT01285 - ABT03421 represents the ovary cell specific DNA sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                      Polypeptide and polynucleotides present in normal and neoplastic ovary cells, useful for identifying, monitoring, staging, diagnosing, preventing and treating ovarian cancer, and non-cancerous disease states
                                                     Ovary cell; neoplastic ovary cell; ovary specific nucleic acid; ovary specific protein; ovarian cancer; breast cancer; 88; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ovary cell; neoplastic ovary cell; ovary specific nucleic acid; ovary specific protein; ovarian cancer; breast cancer; ss; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the disgnostic, prognostic and statistical methods of the invention. This sequence corresponds to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Classifying a breast cancer patient according to prognosis comprises determining the similarity between the level of expression of each of five genes in a cell sample taken from patient, to control levels.

The invention comprises amino acid and DNA sequences which are present in normal and neoplastic ovary cells. The DNA and protein sequences of the invention are useful for determining the presence of an ovary specific nucleic acid or an ovary specific protein in a sample. The DNA and protein sequences of the invention are useful for diagnosing and metastasis of ovarian cancer and breast cancer. Nucleotides ABT03285 - ABT03431 represents the ovary cell specific DNA sequences of the invention Polypeptide and polynucleotides present in normal and neoplastic ovary cells, useful for identifying, monitoring, staging, diagnosing, preventing and treating ovarian cancer, and non-cancerous disease states Sequence 628 BP; 202 A; 115 C; 102 G; 209 T; 0 U; 0 Other; Claim 1; Page 192-193; 247pp; English. in the ovary.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2606114

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1209, Application US/09016434
; Requence 1209, Application US/09016434
; Patent No. 6500938
; GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
; TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEGUENCES: 1490
; CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
; CITY: PALO ALTO
STATE: CALIFORNIA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                   COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" diskette, 1.44 MB, high density
COMPUTER: IBM PS/2, model 55 SX
COMPUTER: IBM PS/2, model 55 SX
OPERATING SYSTEM: MS-DOS version 4.0
SOFTWARE: VAX/VMS Mass11 via Kermit to IBM MS-DOS
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/474,986
FILING DATE: 07-Jun-1995
CLASSIFICATION: vunknown>
RRIOR APPLICATION SATA:
APPLICATION NUMBER: 07/670,085
FILING DATE: williams, Stephan P.
